

# UNIQUE Identity Access Management

## Access Platform

Complete your Business-Network with our new developed access platform.

### Fields of application

Access Platform, secure and straightforward connection without VPN

### Technical details

Server 1 (Access Server and Remote Desktop Gateway):

- Win Server 2008 / 2008 R2 / 2012 / 2012 R2
- Microsoft.NET Framework 2.0
- Internet Information Server (IIS)
- SSL certificate
- SQL Server 2008 / 2012 Express

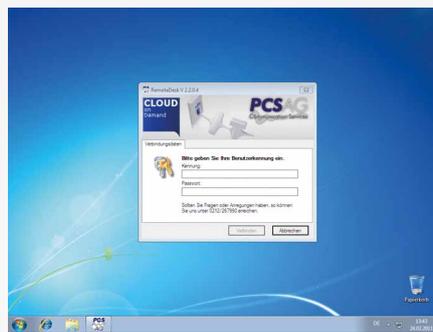

Server 2 (Terminal Server/Remote Desktop Services):

- Win Server 2003 / 2008 / 2008 R2 / 2012 / 2012 R2 – with adequate licensing

On the client side all that is needed is an operating system (Win XP SP3 or higher) or an iPad.

### Fast and secure access platform

Based on the Microsoft RDP 8.0 technology, Microsoft Terminal Server Gateway/ Remote Desktop Gateway and the Microsoft SQL database, our solution offers you encrypted access to your business network in the usual workstation environment.

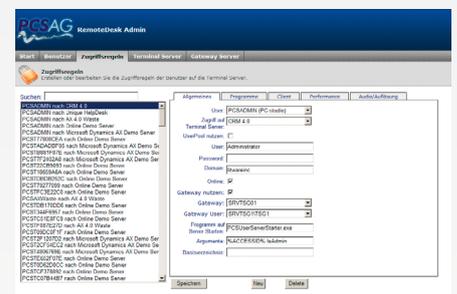

With our Client-Program (1MB) you get fast and secure access to your Company Network

The system can be used on either server farms and stand-alone servers. And it includes a load balancing technology, so fast traffic is manageable.

With its central user administration and management functions it is possible to activate scheduled and time-controlled access for the users.

You can create new users – real and virtual ones. Real users are regular users of your business network. Virtual users are for short-term or demonstration purposes. Another special function is to support your users online (the admin can administer the session).

The access operates without VPN-Server or VPN-Gateways. Through the application use of the encrypted connection over HTTPS and Port 443, no complicated configuration of firewalls or access systems are needed.

Configuration of access policies and settings for different users

The product uses Remote Desktop Protocols allowing easy integration of local resources (Printer or Storage), the communication still runs highly encrypted over Port 443.

### Features and Benefits

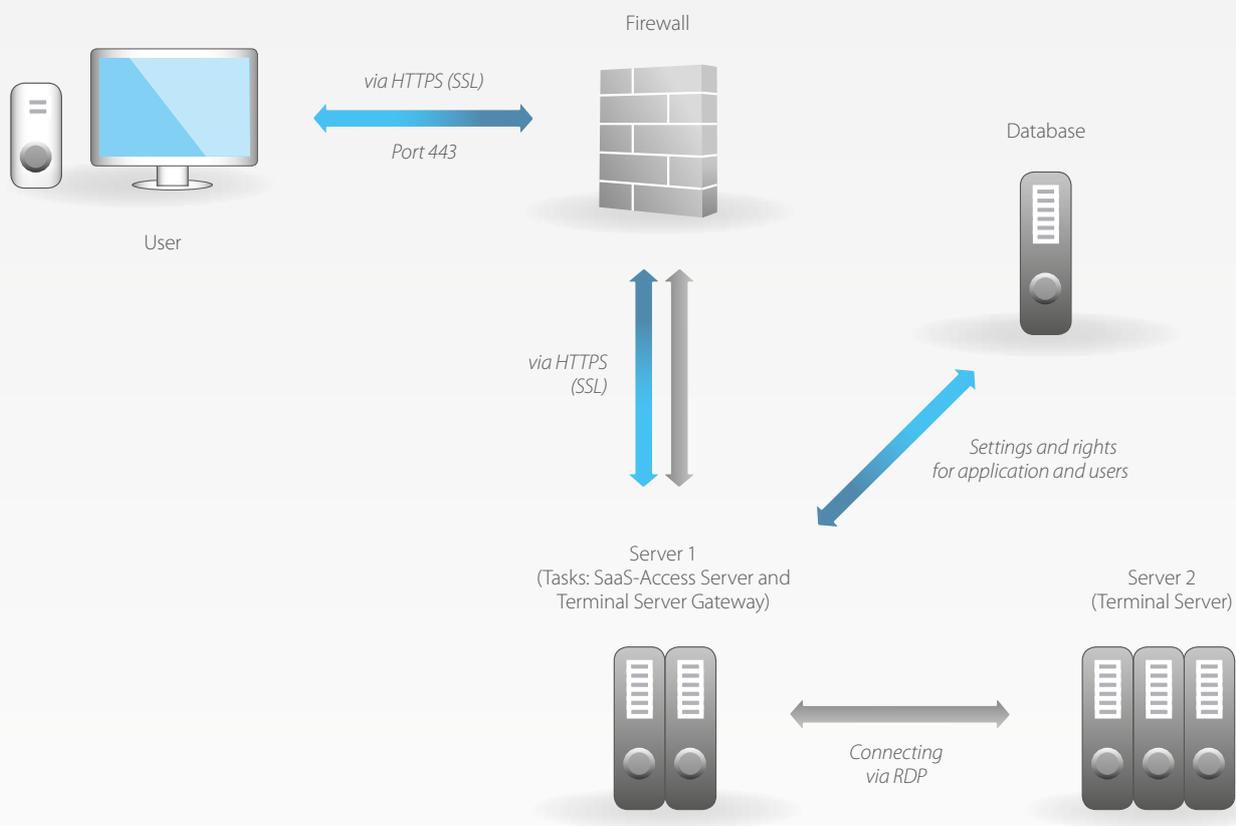

- fast and secure connection
- load balancing
- based on SQL database
- integration of local resources
- access via Password or Token possible
- mobile access (using a notebook, tablet-PC, iPad or comparable device) from everywhere with internet access

# UNIQUE Identity Access Management

## Access Platform

### Communication with UNIQUE Identity Access Management

"UNIQUE Identity Access Management" provides a remote access technology that allows users a direct, HTTPS-encrypted connection to a terminal server-based data center.
